

## How to make a custom-built chair

### Vocabulary exercise:

Go to the vocabulary list below. Cover the Norwegian translations. Use highlighters in two colours (or if you work on a PC: uthevingsfarge for tekst) and mark the ones that you do not know in one colour and the ones that you know in another colour. Then check against the translated words and change colours if necessary.

Then go to the illustrated text and read the text and the picture captions. Highlight the same words again using the same two colours. If you come upon other words that you do not know, highlight them as well and add them to the vocabulary list.

### Vocabulary list

#### 1. Seat depth -

- thigh
- force
- shallow

#### setedybde

lår  
tvinge  
flat

#### 2. Arm height -

- support
- provide
- sturdy

#### armhøyde

støtte  
skaffe  
solid, robust

#### 3. Seat height -

- cut
- circulation
- reduce

#### setehøyde

begrense, kutte  
omløp, sirkulasjon  
redisere, sette ned

#### 4. Angle of backrest -

- center of gravity
- strain

#### vinkel av ryggstøtte

sentrum av gravitasjon (tyngdekraft)  
anstrengelse
