

ASSESSMENT GUIDELINES

| Course code: | ITL22519 | | | | | |
|---|-----------------------|--|--|--|--|--|
| Course name: | Business Software | | | | | |
| Form of examination: | Written group exam | | | | | |
| Date: | May 9th 2022 | | | | | |
| Lecturer(s): | Stig Henning Johansen | | | | | |
| Comments: | | | | | | |
| All group members will get the same grade | | | | | | |

ITL22519 Business Software (Spring 2020)

Knowledge - The student knows

- cutting edge and traditional architectures supporting organizations worldwide
- how to map business requirements and business software features
- how to prioritise and select business software according to a set of business requirements
- main business software available and their purposes
- approaches and guidelines to install and customize business software
- complexity on new system adoption and change management

Skills - The students can

- identify pros and cons of current architectures
- elicit and write business requirements
- apply grounded approaches to support business software selection
- perform a basic installation of a business software
- create an enterprise structure and transactions in the installed business software
- develop a basic customization of the installed software
- integrate the business software with the technological environment

Content

- Information System Architectures (Service-Oriented Architecture, Web Services, Cloud Computing, Microservices, Containers, Serverless Computing)
- Business Software as a support for Business processes: Taxonomies and Architectures
- Business Software Selection and Acquisition
- Business Software Implementation, Integration and Customization
- System introduction and organizational change

Sensors will grade the exams based on the SOLO taxonomy below:

| > > Increa | sing level o | f cognitive c | cognitive complexity | | Making critical judgments based on a sound knowledge base | |
|---|--|--|--|--|--|--|
| | | Solving | open- ended problems | problems Syntese | Evaluering judge appraise evaluate rate compare revise assess estimate | |
| Recalling | Explaining important information | closed-ended problems Anvendelse | Analyse distinguish analyse differentiate | compose plan propose | | |
| important information | Forståelse | interpret apply | | design formulate | | |
| Kunnskap define repeat record list recall name relate underline | translate restate discuss describe recognize explain express identify locate report review tell | employ use demonstrate dramatize practise illustrate operate schedule sketch | appraise calculate experiment test compare contrast criticize inspect debate question relate solve examine categorize | arrange assemble collect construct create set up organize manage prepare | | |
| F | E | D | С | В | A | |

Written Exam paper: 4 reports baded on the 100 point scale below. Excel sheet will be provided to grade the 4 reports

Grading is in line with the following valuation criteria from © UNIVERSITETS- OG HØGSKOLERÅDET (The Norwegian Association of Higher Education Institutions). General, qualitative description of valuation criteria

| А | 92 – 100 points | An excellent performance, clearly outstanding. The candidate demonstrates excellent judgement and a very high degree of |
|---|-----------------|---|
| | | independent thinking |
| В | 77 – 91 points | A very good performance. The candidate demonstrates sound judgement and a high degree of independent thinking. |
| С | 58 – 76 points | A good performance in most areas. The candidate demonstrates a reasonable degree of judgement and independent thinking |
| | | in the most important areas. |
| D | 46 – 57 points | A satisfactory performance, but with significant shortcomings. The candidate demonstrates a limited degree of judgement |
| | | and independent thinking. |
| Е | 40 - 45 points | A performance that meets the minimum criteria, but no more. The candidate demonstrates a very limited degree of judgement |
| | | and independent thinking |
| F | < 40 points | A performance that does not meet the minimum academic criteria. The candidate demonstrates an absence of both judgement |
| | | and independent thinking. |

| | А | в | С | D | E |

| Assignment 2: | | | | points | Achieved points | |
|---------------|---------------------|--|---|--------|-----------------|------|
| L | Areas | Main contents | Guide 2 | 100 | 0 | #I/T |
| | Executive summary | Main purpose and highlights so that I know what to expect | | 3 | | |
| | | Delivers the Executive summary above, complies to academic report writing, easy to | | | | |
| 6 | Flow and structure | read and find the highlights, highlights tied together and link to assignment 3 | | 5 | | |
| | | How did this group link this assignment 2 to assigment 1, ie. From assignment 1 - what | Assignment 1: | | | |
| | | did you use to to understand and to deliver assignment 2 | CSFs drive the business model which again create values for the clients and the company across the 9 sections. The | | | |
| | | | company needs an ecosystem and touchpoints to create these values which again a lot of tasks and process to get this | | | |
| | | | done. These tasks & processes get executed in the BS. Not only executed but with the quality and efficiency to reach the | | | |
| | | | company goals & objectives. We need to understand the industry (CSF) and the company (business model) in order to | | | |
| | | | select the best BS now & future. As we have the CSFs and goals/objectives in assignment 1 - this is where I can find a very | | | |
| 5 | Assignment 1 | | important goal where I argue there is a task where the process is "broken" preventing us to reach that goal. | 5 | | |
| | | What BS theory did you find relevant & why, how did you apply the theory to the | At least: Powerpoint w7 + Requirements-Gathering-for-Software-Selection.pdf + Template ERP Requirements.docx + | | | |
| | | requirement gathering process & why | ERPRequrementsManagement.docx. | | | |
| | | Key words: ERP, business reeningering, process mapping, requirement | What do these keywords mean and how do they fit together | | | |
| 7 | BS theory | gathering/mapping, task, process, workflow, business/user/system requirements | Why are they important and how can they create real bsuiness value for your company | 30 | | |
| | | How did you apply the knowledge from the theory in the section above to your company | Requirement Gathering Framework is good for context & visuals but not to "tell the story" and to structure the input and | | | |
| | | What task and process did you focus on & why | focus. The excel template was constructed for that purpose and should be going from high level to detail level when | | | |
| | | Why is is worthwhile fixing this process task (business case & justification) | reading from the left to the right. So the excel should provide link between BMC and assignment 2 + every column to the | | | |
| | | How well did you describe process "A" (broken) and "B" (fix) and why "B" will make a | right should be linked to the previous column - just adding detail explaning the steps you thought about or the actions | | | |
| | | difference | you took. Let the the excel show the logic/flow and the main contents but tell the story in Word. Explain the headers in | | | |
| | | How did well did you understand and document the different levels of requirements | Excel and make sure to explain as you move from "left to right" (your story). Some of the BS theory will be linked to these | | | |
| | | | headers (e.g. RE teams). You have above picked the top value drives/benefit/goals&objective, so what task do you want | | | |
| | | | to reenginer (why is reenginering important when selecting an ERP system?) to improve so that you get more benfits? The | | | |
| | | | task to be fixed = "A" so make sure to explain what is broken and how this impacts the goal/objective and benefit. This | | | |
| | | | is the justification to spend time&money to fix "as is" and at the same time gives focus for what the reengineered | | | |
| | | | process needs to fix. Task is HL, process is ML and workflow is DL and as we move from HL to DL, we need to capture the | | | |
| | | | business requirements (HL), user requirmeent (ML(and the system requirements (DL). Now we can match | | | |
| | | | task/process/workflow to the business/user/system requirments. The new "B" process needs to be presented a a | | | |
| | | | swimlane flowchart (explain the value of swimlanes & flowchart - you have now also found another tool/template). The | | | |
| | | | flowchart should be easy to understand. One good way is to use colour boxes to focus on key points such as a) where do | | | |
| | Requirement | | we link to another process or ERP module/function , b) where have we solved the problems in "A", c) where have we | | | |
| | gathering | | made improvements to reach our goals/objectives and hence more benefits. You show in the flowchart but tell the story | | | |
| 3 | practise/experience | | in Word. Remember that there are different requirements which need to be met (depending on importance and priority) | 45 | | |
| | | What have you learned both in general (what knowledge/insight into the business did | How does assignment 2 connect to assignment 3 - selecting a BS/ERP? | | | |
| | Implications and | you get from the requirment gathering process) & specificaly (any findings that you | | | | |
| | further use | think is critical for the company) & how will you use that in the other assigments | | 10 | | |
| | | How well the team work together, did you have problems and did you fix these and | | | | |
| 0 | Reflection | how, the "back & forth" and what you learned from it | | 2 | | |

| | | | Total | l | Evaluation & justification |
|---------------------|---|--|----------|-----------------|----------------------------|
| | Assianment 3: | | points & | Achieved points | Eraddorra justinoadorr |
| | | | weight | | |
| Areas | Main contents | Guide | 100 | 0 | #I/T |
| Executive summary | Main purpose and highlights so that I know what to expect | | 3 | | |
| | Delivers the Executive summary above, complies to academic report writing, | | | | |
| | easy to read and find the highlights, highlights tied together and link to | | | | |
| | assignment 3 | | | | |
| Flow and structure | | | 5 | | |
| | How did this group link assignment 1& 2 to this assigment | You should now have linked assignment 1 to assignment 2. In assignment 2 you have reengineered a "process" to improve the | | | |
| | | "task" which will create greater benefits for the company. The new "process" will be executed in an ERP system (Odoo) and would | | | |
| | | need to meet the various requirement you mapped out in assigment 2. | | | |
| | | | | | |
| Assignment 1+2 | | Please also check out the Poweroint on Canvas "Assignment logic and flow" | 5 | | |
| | In not previously included: | To understand more about ther ERP landscape, technologies, vendors ans the selection process: | | | |

| 9 | Reflection | "back & forth" and what you learned from it | 2 | | |

Oral exam:

Oral exam approx. 40 minutes where you present for maximum 20 minutes

- 1. Act as a team but every team member has to present something in regards to the 3 bullets below
- 2. What to present:
 - 1. What is an ERP system and why is it important to the business model
 - 2. How do we select the best ERP system
 - 3. How do we best implement an ERP system
