

# Studieplan for Master in Applied Computer Science (120 ECTS) (2018–2020)

## Fakta om programmet

**Studiepoeng:** 120

**Studiets varighet:** 2 år

**Undervisningsspråk:** Engelsk

## Kontakt

**Studieveileder:** Natalie Tvette Isaksson

**Telefon:** +47 696 08 143

**E-post:** studier@hiof.no

Fakultet for informasjonsteknologi, ingeniørfag og økonomi  
English

## Innholdsfortegnelse

- Oppbygging og gjennomføring
- Studiemodell

## Oppbygging og gjennomføring

### Studiemodell

Denne studiemodellen har en ny utforming. [Fortell oss hva du synes om den](#)

### Høst 2018

#### Obligatoriske emner

ITI46518

Vitenskapelig metode og teori

15 stp

ITI46318

Interaksjonsdesign

15 stp

### Vår 2019

## Velg 2 av 3 emner:

Choose 2 of these courses:

ITI43210 Maskinl�ring	15 stp
ITI43414 Avanserte temaer i informasjonssystemer	15 stp
ITI43517 Modellering av cyber-fysiske systemer	15 stp

## Business project

ITI49018 Bedriftsoppgave	15 stp
-----------------------------	--------

## Research project

ITI49114 Forskningsoppgave	15 stp
-------------------------------	--------

## H st 2019

### Obligatoriske emner

ITI40314 Spesialpensum	15 stp
ITI40614 · Del 1 av 2 Masteroppgave	

## V r 2020

### Obligatoriske emner

ITI40614 · Del 2 av 2 Masteroppgave	45 stp

# ITI46518 Scientific Method and Theory (Autumn 2018)

## Facts about the course

**ECTS Credits:** 15

**Responsible department:** Faculty of Computer Science

**Course Leader:** Cathrine Linnes

**Teaching language:** English

**Duration:** ½ year

## Table of contents

- The course is connected to the following study programs
- Absolute requirements
- Recommended requirements
- Lecture Semester
- The student's learning outcomes after completing the course
- Content
- Forms of teaching and learning
- Workload
- Practical training/internship
- Coursework requirements - conditions for taking the exam
- Examination
- Examiners
- Conditions for resit/rescheduled exams
- Course evaluation
- Literature

## The course is connected to the following study programs

Mandatory course in the master programme in applied computer science full time and part time.

## Absolute requirements

None.

## Recommended requirements

None.

## Lecture Semester

First semester (autumn) in the full time programme.

First or third semester (autumn) in the part time programme.

## The student's learning outcomes after completing the course

### Knowledge

The student is knowledgeable about central methods and theories within the field of applied computer science, and different perspectives on the use of informatics in the society. This includes:

- Research design and experiment techniques
- Statistical methods
- Methods for design and evaluation of information systems
- Social science methodologies
- Data, analysis and modelling techniques
- Research and development activities at the faculty and its partners

The student is familiar with publishing channels relevant to applied computer science, different types of publications, their roles and functions.

### Skills

The student is able to:

- assess scientific literature within the field of applied computer science
- use and review scientific references
- use relevant statistical methods for analysing data
- use methods from social sciences and work with observation and interviews
- use methods for design and evaluation of IT systems
- think critically about the use of information technology deployed in organizations and in the society in general

### General competence

After examination, the student has a sufficient understanding of applied computer science and the faculty's research and development activities. The student also has a better understanding of the use of IT in our society.

## Content

This course is designed for entering computer science graduate students. The course:

- acquaints students with the theories of current and historical importance.
- introduces or reinforces the tenets of the scientific method.
- introduces the faculty, previews key concept areas being taught in the program.
- discusses research designs and methods appropriate to the computer science program.
- introduces students to the hardware, software, and communication skills to be used throughout the program of studies.

## Forms of teaching and learning

Lectures, presentations of scientific work, and lab exercises.

## Workload

Four 2-days sessions during daytime, a total of 8 days. Between the sessions, supervision is given. Approx 400 hours.

## Practical training/internship

None.

## Coursework requirements - conditions for taking the exam

None.

## Examination

### **Portfolio and individual written exam.**

The exam consists of both a portfolio and an individual written exam. The portfolio counts 60% and consists of:

- Two research projects
- One idea paper

The individual written exam counts 40% and is based on the course curriculum. Duration 2 hours. No supporting materials permitted.

Assessment on the A - F grading scale.

## Examiners

The exam is assessed by the course instructor and an internal or external examiner.

## Conditions for resit/rescheduled exams

Upon re-examination, each part of the examination can be retaken.

## Course evaluation

This course is evaluated by a

- Mid-term evaluation (compulsory)

The responsible for the course compiles a report based on the feedback from the students and his/her own experience with the course. The report is discussed by the study quality committee of the faculty of Computer Sciences.

## Literature

*Last updated 17.04.2018. The reading list may be subject to change before the semester starts.*

The following textbook is required for this course:

- Salkind, N.J. (2016). Exploring Research (9th ed), ISBN: 978-1292156293.
- APA. (2009). Publication Manual of the American Psychological Association (6th ed), ISBN: 978-1433805615

Additional course material will be posted on the course website.

# ITI46318 Interaction Design (Autumn 2018)

## Facts about the course

**ECTS Credits:** 15

**Responsible department:** Faculty of Computer Science, Engineering and Economics

**Course Leader:** Susanne Koch Stigberg

**Teaching language:** English

**Duration:** ½ year

## Table of contents

- The course is connected to the following study programs
- Absolute requirements
- Recommended requirements
- Lecture Semester
- The student's learning outcomes after completing the course
- Content
- Forms of teaching and learning
- Workload
- Practical training/internship
- Coursework requirements - conditions for taking the exam
- Examination
- Examiners
- Conditions for resit/rescheduled exams
- Course evaluation
- Literature

## The course is connected to the following study programs

Mandatory course in the master programme in applied computer science full time and part time.

## Absolute requirements

None.

## Recommended requirements

None.

## Lecture Semester

First semester (autumn) in the full time programme.

First or third semester (autumn) in the part time programme.

## The student's learning outcomes after completing the course

### Knowledge

The student is familiar with

- central theories and models in interaction design
- the development of the field, interaction design and emerging trends

### Skills

The student is able to

- design and conduct experiments with new and existing technology for interaction between humans and machines
- relate own work to existing literature, theories and models
- read and reflect on interaction design literature

### General competence

Through the course, the student has gained competence in critical reading and reflection. In addition, the student has got experience with project work in groups.

## Content

The course consists of three parts:

- Theories and models in interaction design
- Current trends in interaction design
- Methods for design, prototyping and evaluation

## Forms of teaching and learning

In the first part of the course, the students will be given lectures comprising the theory in the course. In the second part, the students will work on their projects. Supervision will be given throughout the semester.

Emphasis will be put on reading and using relevant literature, and presentation of own work.

## Workload

Lectures and supervision 4 hours per week. Approx 400 hours.

## Practical training/internship

None.

## Coursework requirements - conditions for taking the exam

The student must during the semester:

- present at least one paper from the reading list (individual or in a group) and lead a plenary discussion based on this.
- complete and present at least one group project which includes design, prototyping and evaluation of new or existing technology for human-computer interaction.

Coursework requirements must be accepted to qualify for the exam.

## Examination

**The exam is divided into two parts:**

### **Individual written exam (50%)**

Individual written exam based on the course curriculum. Duration 4 hours. No supporting materials allowed.

### **Scientific paper i groups (50%)**

Scientific paper based on the group project.

Grading scale A - F in both parts.

Both parts of the exam must be passed to pass the exam as a whole.

## Examiners

The exam is assessed by the course instructor and an internal or external examiner.

## Conditions for resit/rescheduled exams

Upon re-examination, each part of the examination can be retaken.

## Course evaluation

This course is evaluated by a

- Mid-term evaluation (compulsory)

The responsible for the course compiles a report based on the feedback from the students and his/her own experience with the course. The report is discussed by the study quality committee of the faculty of Computer Sciences.

## Literature

*Last updated 15.12.2016. The readinglist may be subject to change before the semester starts.*

- Rogers, Preece and Sharp (2015): Interaction Design: Beyond Human - Computer Interaction. Wiley, 4th ed. ISBN: 9781119020752
- Lövgren and Stolterman (2007): Thoughtful Interaction design. ISBN: 9780262622097
- The curriculum will be supported by material (scientific papers) during the semester. The material will be posted on the learning platform.

# ITI43210 Machine Learning (Spring 2019)

## Facts about the course

**ECTS Credits:** 15

**Responsible department:** Faculty of Computer Science, Engineering and Economics

**Course Leader:** Roland Olsson

**Teaching language:** English

**Duration:** ½ year

## Table of contents

- The course is connected to the following study programs
- Absolute requirements
- Recommended requirements
- Lecture Semester
- The student's learning outcomes after completing the course
- Content
- Forms of teaching and learning
- Workload
- Practical training/internship
- Coursework requirements - conditions for taking the exam
- Examination
- Examiners
- Conditions for resit/rescheduled exams
- Course evaluation
- Literature

## The course is connected to the following study programs

Elective course in the master programme in applied computer science full time and part time.

## Absolute requirements

None.

## Recommended requirements

None.

## Lecture Semester

Second semester (spring) in the full time programme.

Second or fourth semester (spring) in the part time programme.

## The student's learning outcomes after completing the course

### Knowledge

The student has

- an overview over the most important methods in machine learning, and a deeper knowledge of three of them, viz. Decision Trees, Neural Networks, and Evolutionary Computation
- knowledge about the practical challenges in connection with data mining, e.g. overfitting, missing values, and classifications with different costs.
- gained knowledge in basic topics such as numerical optimisation and statistical methods, for example Bayesian methods used in search engines like Google and in spam filters.

### Skills

The student is able to

- arrange or code data to fit data mining and machine learning algorithms
- choose correct tools for a given type of data
- decide on how good the results are based on simple statistical analysis of, for instance, classification exactness
- use machine learning in practical applications and be able to transfer machine learning models to programming language code

### General competence

The student has improved his/her competence in

- research and development, for instance finding relevant literature and understand scientific articles about machine learning
- writing scientific texts in English
- treat and analyse data of arbitrary type, even if this is done without inductive learning

## Content

Machine learning is about computers learning through training and experience instead of being explicitly programmed for a given task. The students will get acquainted with several methods and algorithms for machine learning. Based on this, the students should be able to select the methods best suited for the problem in question.

The course should give the students knowledge about the basic properties common to all machine learning methods. Examples include ability to generalise and heuristic search.

The course contains three projects, one about decision trees, rules and regression analysis, one about neural networks, and one about evolutionary computation.

Induction of decision trees and some applications such as medical diagnosis and credit evaluation.

Artificial neural nets and optimization algorithms such as steepest descent and trust region Newton methods. Applications of neural nets to sound and image analysis.

Basic theory for machine learning, for example Bayes' formula, maximum likelihood and the minimum description length principle.

Instance based learning such as nearest neighbour, locally weighted regression, and radial basis functions.

Evolutionary computation, especially genetic algorithms and genetic programming. General principles for evolution. Selection methods and genetic operators such as mutation and crossover. The Baldwin effect.

Some of the topics above require basic knowledge of statistics and information theory which will be taught as needed.

## Forms of teaching and learning

Lectures and supervision.

## Workload

2 hours lectures per week and projects with mandatory meetings with the supervisor every week. Approx 400 hours.

## Practical training/internship

None.

## Coursework requirements - conditions for taking the exam

None.

## Examination

### ***Portfolio and take home exam***

The exam consists of both a portfolio and a take home exam.

*The portfolio* (determines 65 % of the final grade) consists of:

- one project on decision trees
- one project about neural nets
- one project in automatic programming

The projects can be carried out individually or in groups of two students. The students will get an individual grade.

*The three day home exam* determines 35 % of the final grade and focus on theory. The home exam can be carried out individually or in groups of two students. The students will get an individual grade.

The student will get an individual joint grade for the entire course. Grades: A- F.

## Examiners

The exam is assessed by the course instructor and an internal or external examiner.

## Conditions for resit/rescheduled exams

Upon re-examination, both parts of the examination must be retaken. Upon re-examination, new assignments and the take home exam will be decided by the course instructor.

## Course evaluation

This course is evaluated by a

- Mid-term evaluation (compulsory)

The responsible for the course compiles a report based on the feedback from the students and his/her own experience with the course. The report is discussed by the study quality committee of the faculty of Computer Sciences.

## Literature

*Last updated 15. October 2015. The readinglist may be subject to change before the semester starts.*

# ITI43414 Advanced topics in information systems (Spring 2019)

## Facts about the course

**ECTS Credits:** 15

**Responsible department:** Faculty of Computer Science, Engineering and Economics

**Course Leader:** Ricardo Colomo-Palacios

**Teaching language:** English

**Duration:** ½ year

## Table of contents

- The course is connected to the following study programs
- Absolute requirements
- Recommended requirements
- Lecture Semester
- The student's learning outcomes after completing the course
- Content
- Forms of teaching and learning
- Workload
- Practical training/internship
- Coursework requirements - conditions for taking the exam
- Examination
- Examiners
- Conditions for resit/rescheduled exams
- Course evaluation
- Literature

## The course is connected to the following study programs

Elective course in the master programme in applied computer science full time and part time.

## Absolute requirements

None.

## Recommended requirements

None.

# Lecture Semester

Second semester (spring) in the full time programme.

Second or fourth semester (spring) in the part time programme.

## The student's learning outcomes after completing the course

### Knowledge

The student

- is familiar with principles for sustainable information systems
- is familiar with the use of IT in businesses
- is familiar with hybrid IT management (including cloud computing)
- has a good overview of health informatics
- is familiar with global trends in information systems management and development.

### Skills

The student is able to develop a strategy for the deployment of an information system in a business.

### General competence

The student is able to apply scientific theory and methodology in a practical business setting.

## Content

- Energy Informatics
- Health IT
- Information Systems in a global world
- IT Governance
- New trends in Business Software (Cloud Computing, Hybrid IT)
- Information Systems Development: Improvement & Capability
- Big Data Acquisition, Storage, Analysis & Visualization. An information systems perspective.

## Forms of teaching and learning

Ordinary lectures, video lectures, supervision and project work.

## Workload

Approx. 400 hours.

## Practical training/internship

None.

## Coursework requirements - conditions for taking the exam

None.

# Examination

## Individual oral exam

Individual oral exam based on the course curriculum and project work. Duration approx. 20-30 min. No supporting materials allowed. Grades: A - F.

## Examiners

The exam is assessed by the course instructor and an internal or external examiner.

## Conditions for resit/rescheduled exams

None.

## Course evaluation

This course is evaluated by a

- Mid-term evaluation (compulsory)

The responsible for the course compiles a report based on the feedback from the students and his/her own experience with the course. The report is the discussed by the study quality committee of the faculty of Computer Sciences.

# ITI43517 Modelling Cyber-Physical Systems (Spring 2019)

## Facts about the course

**ECTS Credits:** 15

**Responsible department:** Faculty of Computer Science, Engineering and Economics

**Course Leader:** Øystein Haugen

**Teaching language:** English

**Duration:** ½ year

## Table of contents

- The course is connected to the following study programs
- Absolute requirements
- Recommended requirements
- Lecture Semester
- The student's learning outcomes after completing the course
- Content
- Forms of teaching and learning
- Workload
- Practical training/internship
- Coursework requirements - conditions for taking the exam
- Examination
- Examiners
- Conditions for resit/rescheduled exams
- Course evaluation
- Literature

## The course is connected to the following study programs

Elective course in the master programme in applied computer science full time and part time.

## Absolute requirements

None.

## Recommended requirements

None.

## Lecture Semester

Second semester (spring) in the full time programme.

Second or fourth semester (spring) in the part time programme.

## The student's learning outcomes after completing the course

### Knowledge

The student

- understands the challenges associated with cyber-physical systems
- has experienced the relevance of good software design principles

### Skills

The student has the capability to

- model and implement reactive systems with concurrency
- perform analysis of consistency of models of systems with concurrency
- connect sensors, actuators and controlling components in a functioning system
- give and take constructive criticism of the system design and functioning
- receive the experience of building a cyber-physical system and making it execute

### General competence

The student

- can build systems in «Internet of Things»
- can assess realistically what errors may occur in cyber-physical systems and how to minimize their vulnerability
- has some insight into formal semantics of sequence diagrams

## Content

The course focus on how reactive systems can be built with emphasis on modeling. The models are executable and based on state machines. The requirements of these concurrent systems are modeled as sequence diagrams, and it is emphasized that the requirements and design are consistent.

In particular, we emphasize reactive systems using the Internet of Things, and we use a running example where the functionality is enhanced during the course following an agile method.

Towards the end of the course, we show how systems can be made more resilient to unexpected incidents and errors. Security of cyber-physical systems and how to perform risk-analysis of such systems will be covered.

## Forms of teaching and learning

Project work, lectures and guided lab and exercises.

For each instance of the course, we create new project tasks. We teach the project teams how to give and take constructive feedback.

## Workload

3 compact sessions of 2 full days each. Between the sessions the students will work on the mandatory project and supervision will be offered. Approx 400 hours.

## Practical training/internship

None.

## Coursework requirements - conditions for taking the exam

- Mandatory project: There will be one project, with deliverable at each teaching session (2 deliverables). Project group size should be 2-4 people, but with few students, single person project will be possible. The students should expect to spend 100 hours on the project.
- Plenary presentation and evaluation of the project. The project should normally result in an executable model that should be demonstrated at the plenary presentation.

Coursework requirements must be accepted to qualify for the exam.

## Examination

### Individual oral exam:

Individual oral exam based on the course curriculum and mandatory exercises. Approximately 30 minutes duration. No supporting materials allowed.

Assessment on the A - F grading scale.

## Examiners

The exam is assessed by the course instructor and an internal or external examiner.

## Conditions for resit/rescheduled exams

None.

## Course evaluation

This course is evaluated by a

- Mid-term evaluation (compulsory)

The responsible for the course compiles a report based on the feedback from the students and his/her own experience with the course. The report is discussed by the study quality committee of the faculty of Computer Sciences.

## Literature

A number of articles and lecture notes constitute the curriculum. The articles and notes will be posted on the learning platform.

# ITI49018 Business project (Spring 2019)

## Facts about the course

**ECTS Credits:** 15

**Responsible department:** Faculty of Computer Science, Engineering and Economics

**Campus:** Halden

**Teaching language:** English

**Duration:** ½ year

## Table of contents

- The course is connected to the following study programs
- Lecture Semester
- The student's learning outcomes after completing the course
- Content
- Forms of teaching and learning
- Workload
- Coursework requirements - conditions for taking the exam
- Examination
- Examiners
- Conditions for resit/rescheduled exams
- Course evaluation
- Literature

## The course is connected to the following study programs

Elective course after application in the master programme in applied computer science. Full time and part time

## Lecture Semester

Second semester (spring) in the full time programme.

Second or fourth semester (spring) in the part time programme.

In addition the student is expected to do some work during the summer vacation.

## The student's learning outcomes after completing the course

Knowledge

The student has

- acquired good knowledge of ICT, giving a good systems perspective
- knowledge on the use of ICT within the selected theme of work

#### Skills

The student is able to

- use teoretical methods to solve professional tasks
- work with projects and tasks, both individually and as part of a team

#### General competence

The student is able to produce new knowledge through literature search, contact with experts, users and in his/her project work.

## Content

An agreement between the student and the company must be made before the student can attend this course. The agreement must be approved by the Head of Studies before the project starts.

A description of the business project should be prepared by the student and the company in collaboration. This must be endorsed by the faculty before the work starts. This is done to ensure necessary volume and depth in the project.

## Forms of teaching and learning

Project work with guidance from a mentor at the company and a supervisor at Østfold University College.

## Workload

Approx. 600 hours.

## Coursework requirements - conditions for taking the exam

Coursework requirements - conditions for taking the exam

- Deliver a preliminary project report within two weeks after starting the project.
- Prepare and conduct meetings with mentor and supervisor at least once every month, including writing abstracts and logging working hours.
- Present the project at half time (approximately 300 hours). This includes delivering a mid-term report.

Coursework requirements must be accepted to qualify for the exam.

## Examination

Project report and individual oral exam

The assessment is based on the project report and an individual oral exam. The project report is graded on the A - F grading scale. It is given a tentative grade of the report. This grade can be adjusted up to 2 stages at the oral exam.

The individual oral exam consists of a presentation and discussion of the project report. Duration approx. 20-30 min. Except the presentation, no supporting materials are allowed.

If the student decides to challenge the assessment, the project report must be re-assessed. If the new assessment affects the tentative grading of the report, a new oral exam will be arranged.

## Examiners

The exam is assessed by the course instructor and an internal or external examiner.

## Conditions for resit/rescheduled exams

In case of re-examination, a new project must be carried out in agreement with the course instructor and the company.

## Course evaluation

This course is evaluated by a

- Mid-term evaluation (compulsory)

The responsible for the course compiles a report based on the feedback from the students and his/her own experience with the course. The report is discussed by the study quality committee of the faculty of Computer Sciences.

## Literature

Depends on the project and is agreed on with the supervisor and the company.

# ITI49114 Research project (Spring 2019)

## Facts about the course

**ECTS Credits:** 15

**Responsible department:** Faculty of Computer Science, Engineering and Economics

**Course Leader:** Jan Høiberg

**Teaching language:** English

**Duration:** ½ year

## Table of contents

- The course is connected to the following study programs
- Absolute requirements
- Recommended requirements
- Lecture Semester
- The student's learning outcomes after completing the course
- Content
- Forms of teaching and learning
- Workload
- Practical training/internship
- Coursework requirements - conditions for taking the exam
- Examination
- Examiners
- Conditions for resit/rescheduled exams
- Course evaluation
- Literature

## The course is connected to the following study programs

Elective course after application in the master programme in applied computer science.

## Absolute requirements

None.

## Recommended requirements

None.

## Lecture Semester

Second semester (spring) in the full time programme.

Second or fourth semester (spring) in the part time programme.

## The student's learning outcomes after completing the course

### Knowledge

The student:

- has in depth knowledge of one research project at the faculty or at a partner institution.
- has thorough understanding of the relevant field of research.
- is familiar with relevant publishing channels.
- is familiar with relevant methods and theories.

### Skills

The student is able to:

- write a scientific paper aimed at publishing.
- defend the choice of research problem and methods.
- define a research problem.
- design and perform a scientific experiment.

### General competence

The student gains experience

- with collaboration with internal or external researchers.
- in research, including planning, performing and reporting in an existing research project.

## Content

Student and supervisor agree on a theme related to existing research at the faculty or a partner institution.

Regular supervision and practical project work constitute a major part of the course.

## Forms of teaching and learning

Reading, project work, reporting, debate and discussion.

## Workload

No regular lectures. Regular meetings with supervisor. Approx 400 hours.

## Practical training/internship

None.

## Coursework requirements - conditions for taking the exam

- Project description essay in the beginning of the semester
- Mid-term report
- Work log

Coursework requirements must be accepted to qualify for the exam.

## Examination

### Paper and individual oral exam

Paper (approx. 10-20 pages) is assessed to Pass / Fail.

Individual oral exam consisting of a presentation and discussion of the paper. Duration approx. 20-30 min. Graded on scale A-F. Except the presentation, no supporting materials are allowed.

The paper must be assessed to Pass in order to qualify to the oral exam. The student will get an individual joint grade for the entire course.

In case of a Fail, the student can request a re-assessment. If the new assessment affects the preliminary grading of the paper, a new oral exam will be arranged.

## Examiners

The exam is assessed by an internal or external examiner in consultation with the supervisor.

## Conditions for resit/rescheduled exams

Upon re-examination, both parts of the examination must be retaken. Upon re-examination, a new topic will be decided in cooperation with the person responsible for the course and the supervisor.

## Course evaluation

This course is evaluated by a

- Mid-term evaluation (compulsory)

The responsible for the course compiles a report based on the feedback from the students and his/her own experience with the course. The report is discussed by the study quality committee of the faculty of Computer Sciences.

## Literature

Literature is selected by the supervisor and the student based on the project theme.

# ITI40314 Selected Topics (Autumn 2019)

## Facts about the course

**ECTS Credits:** 15

**Responsible department:** Faculty of Computer Science

**Campus:** Halden

**Course Leader:** Jan Høiberg

**Teaching language:** English

**Duration:** ½ year

## Table of contents

- The course is connected to the following study programs
- Absolute requirements
- Lecture Semester
- The student's learning outcomes after completing the course
- Content
- Forms of teaching and learning
- Workload
- Coursework requirements - conditions for taking the exam
- Examination
- Examiners
- Conditions for resit/rescheduled exams
- Literature

## The course is connected to the following study programs

Mandatory course in the master programme in applied computer science full time and part time.

## Absolute requirements

The student must have passed at least 45 ECTS credits before starting the course selected topics.

## Lecture Semester

First half of third semester (autumn - to the middle of October) in the full time programme.

Fifth semester in the part time programme.

## The student's learning outcomes after completing the course

## **Knowledge**

The student has attained acquaintance and knowledge about the content of literature relevant for the themes of the master thesis.

## **Skills**

The student is able to account for, both orally and in writing, the content of literature relevant for the themes of the master thesis.

## **General competence**

The student is able to write academic texts.

## **Content**

The course aims at preparing the student for his/her master thesis. The content is chosen individually and is related to the master project.

The student shall, together with his/her supervisor, find literature (books, articles, webpages) that is relevant for the master project. The student shall produce a report summing up this literature and give an oral presentation of the report.

## **Forms of teaching and learning**

Guided self-study.

## **Workload**

Approx. 450 hours.

## **Coursework requirements - conditions for taking the exam**

The student must write an individual report summing up the literature.

There will be held a mandatory seminar in academic writing.

Coursework requirements must be accepted to qualify for the exam.

## **Examination**

### **Individual oral exam**

Individual oral exam, where the student presents and discusses his/her special topic. Duration approx. 20-30 min. Except the presentation, no supporting materials are allowed.

The grading is individual with a "pass / no pass" mark.

## **Examiners**

The exam is assessed by an internal or external examiner in consultation with the supervisor.

## **Conditions for resit/rescheduled exams**

Upon re-examination, new literature must be decided in cooperation with supervisor.

## **Literature**

Individually chosen.

---

Last updated from FS (Common Student System) Oct. 26, 2021 2:30:51 AM

# ITI40614 Master's Thesis (Autumn 2019–Spring 2020)

## Facts about the course

**ECTS Credits:** 45

**Responsible department:** Faculty of Computer Science, Engineering and Economics

**Campus:** Halden

**Course Leader:** Jan Høiberg

**Teaching language:** English

**Duration:** 1 year

## Table of contents

- The course is connected to the following study programs
- Absolute requirements
- Lecture Semester
- The student's learning outcomes after completing the course
- Content
- Forms of teaching and learning
- Workload
- Examination
- Examiners
- Conditions for resit/rescheduled exams
- Course evaluation
- Literature

## The course is connected to the following study programs

Mandatory course in the master programme in applied computer science full time.

## Absolute requirements

The student must have passed the course Selected Topics.

## Lecture Semester

Third and fourth semester (autumn and spring) in the full time programme.

## The student's learning outcomes after completing the course

### Knowledge

The student has

- attained the requisite knowledge and expertise for challenging jobs in research and development in the field.
- gained knowledge from literature and methods related to the subjects that are part of the master thesis.

## **Skills**

The student is able to

- work independently with a complex problem over a longer period of time.
- analyze a situation, describe a problem and plan its solution.
- master feasible planning that consider alternatives, limitations and time constraints.
- collect and analyze relevant information with an ethically healthy and critical approach.
- present research and results in a clear and comprehensive written thesis.
- communicate knowledge clearly and precisely, orally and in writing.
- express own and others reflections and solutions in the chosen area of research.
- construct models and implement them in digital environments.
- apply methods and design principles to make prototypes for different information systems.

## **General competence**

The student has

- obtained a relation to scientific literature and methods.
- developed academic curiosity
- gained consciousness towards values such as openness, precision and ability to discriminate between knowledge and opinions.
- the ability to think critically about central ethical, philosophical and scientific problems in his/her field.

## **Content**

The content may vary significantly and may include research, development, testing or analysis that will be documented in the master thesis.

## **Forms of teaching and learning**

Guided self-study, writing a master thesis.

## **Workload**

Approx. 1350 hours. Supervision constitutes 40 hours.

## **Examination**

### **Master thesis and oral exam**

The assessment is based on the master thesis (individually or in groups of two people) and an individual oral exam. At the oral examination the candidate first holds a presentation of the master thesis (approx. 30 min). Then the candidate defends his/her thesis (approx 30 min). The oral examination is public.

The thesis is graded on the A- F grading scale. It is given a tentative grade of the thesis. This grade can be adjusted up to 2 stages at the oral exam.

If the student decides to challenge the assessment, the thesis must be re-assessed. If the new assessment affects the tentative grading of the thesis, a new oral exam will be arranged.

### **Plagiarism control/cheating**

Master's theses is subject to electronic plagiarism control. Exam papers that are partly or entirely identical will not be approved and will be regarded as cheating. For further information please see Exam regulations for Østfold University College.

## **Examiners**

The master thesis is assessed by an external examiner in consultation with the supervisor.

## **Conditions for resit/rescheduled exams**

Upon re-examination, both parts of the examination must be retaken.

If the student wishes to improve a passed result of his/her master thesis, the thesis must be rewritten with a new problem statement. In this case, the student is not entitled to receive new academic supervision.

## **Course evaluation**

This course is evaluated by a

- Mid-term evaluation (compulsory)

The responsible for the course compiles a report based on the feedback from the students and his/her own experience with the course. The report is discussed by the study quality committee of the faculty of Computer Sciences.

## **Literature**

Individually chosen, depending on the thesis.
